```

```
Training set : 240 samples
Test set     : 60 samples

✅ Bag of Words     — Feature matrix shape: (240, 714)
✅ TF-IDF (words)   — Feature matrix shape: (240, 714)
✅ Char N-grams     — Feature matrix shape: (240, 4472)

=======================================================
📌 WHY CHARACTER N-GRAMS WORK BEST:
=======================================================
• Swahili uses 'ni', 'na', 'wa' patterns heavily
• Luo has unique 'ng'', 'dh', 'ach' character sequences
• Sheng mixes Swahili+English character patterns
• English has 'th', 'ing', 'ed' endings
• N-grams capture these WITHOUT needing a full dictionary
```

```

# CELL 18: Handling code-mixed text
# ============================================================

# Code-mixed text (e.g., "Niko fine, just tired bana") is common in
# Kenyan social media. Here's a simple strategy to handle it.

def detect_with_confidence(text, model, threshold=0.5):
    """
    Returns prediction + confidence score.
    If max probability < threshold, flags as 'Mixed/Uncertain'.
    """
    # Only LogisticRegression supports predict_proba natively
    probs = model.predict_proba([text])[0]
    classes = model.classes_
    max_prob = max(probs)
    predicted = classes[probs.argmax()]

    if max_prob < threshold:
        return f"Mixed/Uncertain (closest: {predicted}, {max_prob:.0%})"
    return f"{predicted} ({max_prob:.0%} confidence)"

mixed_examples = [
    "Niko fine, just tired bana",
    "I need chakula sasa hivi",
    "Habari yako, are you okay?",
    "Maze this job is matek sana",
    "An gi tich but I need a break",
]

print("=" * 60)
print("🔀 CODE-MIXED TEXT — CONFIDENCE-BASED DETECTION")
print("=" * 60)
for text in mixed_examples:
    result = detect_with_confidence(text, lr_model, threshold=0.6)
```

```
    print(f"  '{text}'")
    print(f"   → {result}\n")
```

```
============================================================
🔀 CODE-MIXED TEXT — CONFIDENCE-BASED DETECTION
============================================================
  'Niko fine, just tired bana'
   → Sheng (62% confidence)

  'I need chakula sasa hivi'
   → Mixed/Uncertain (closest: Swahili, 50%)

  'Habari yako, are you okay?'
   → Mixed/Uncertain (closest: Swahili, 56%)

  'Maze this job is matek sana'
   → Mixed/Uncertain (closest: Sheng, 49%)

  'An gi tich but I need a break'
   → English (66% confidence)
```

```

## Overview
An NLP system that detects the language of short text in:
- Swahili
- English
- Sheng (Nairobi urban slang)
- Luo (Dholuo)

## Files
| File | Description |
|------|-------------|
| language_dataset.csv | 300 labelled samples (75 per language) |
| app.py | Streamlit web interface |
| language_id_model.pkl | Trained Logistic Regression model |
| confusion_matrices.png | Model evaluation heatmaps |
| model_comparison.png | Accuracy comparison chart |

## Models Used
- Multinomial Naive Bayes
- Logistic Regression (best performer)
- SVM (LinearSVC)

## Course
CSC423 - Special Topics in NLP
